

Masterclass

Welcome in the esthetic zone

Date
22 november 2024

Location
BioHorizons Camlog Benelux

Speaker
Martijn Moolenaar

Introduction

“Quality is no accident, quality is top sport”

Implantation in the esthetic zone requires a detailed approach. Face analysis plays a role in determining the correct position of the implant.

It is then determined whether soft tissue micro-surgery is required with or without bone augmentation techniques. In short: a blend of all possibilities within implantology.

Meet the speaker

Martijn Moolenaar is a pioneer in the field of dentistry. As a dentist-implantologist NVOI, prosthodontist and founder of Dental Design Center in Blaricum, he carries out his passion for dentistry the way he envisions it: conservative dentistry with top quality.

Since 2014 he is an active member of the European Academy of Esthetic Dentistry and since 2008 a member of the American Academy of Fixed Prosthodontics. From 2009 till 2019 he was a board member of the “Nederlands Vlaamse Vereniging voor Restauratieve tandheelkunde”. Since 2011 EPA board certified prosthodontist.

The program

09:00

Registration

09:30 - 10:45

Part 1

- Esthetic guidelines
 - Biologic factors
 - Restorative factors
-

10:45 - 11:15

Coffee break

11:15 - 12:30

Part 2

- Backwards planning
 - Digital workflow
 - Immediate implant placement
-

12:30 - 13:30

Lunchbreak

13:30 - 14:45

Part 3

- Hands-on implant placement in a fresh extraction socket
 - Socket preservation
 - Soft tissues graft
 - Implant placement in a healed site
 - Suture techniques and materials
-

14:45 - 15:15

Coffee break

15:15 - 16:30

Part 4

- Continuation hands-on
- Restorative protocol
- Material selection
- Maintenance
- Q and A

Learning objectives

During the Masterclass – Welcome in the esthetic zone the focus will be on the biologic and restorative principles of implant placement.

How this principles help to analyze a case and plan implants in the esthetic zone. 3D implant planning and (semi-) guided surgery is important to have a predictable surgical outcome. Preferably screw-retained restorations are the adjective. The surgical and restorative concepts will be highlighted during the course. There is also a hands-on part so that the surgical part can be practiced on surgical models.

In collaboration with

Registration

Registration is possible via email at moolenaar.education@gmail.com

Limited spots available. The course is conducted in English.
